[Article in *Zoological Studies* 42(1):203-210(1993)]

In Table 1, the LM/SM of a) Female-choice method, and the LF/SF of Male-choice method had been mis-printed. They should be shown as below.

Table 1. Mating success of large and small *Phorticella striata* flies along with χ^2 values

a) Female-choice method

	LM	SM	Total	χ^2
SF	46	14	60	17.07***
LF	50	16	66	17.52***

b) Male-choice method

	LF	SF	Total	χ^2
SM	38	14	52	10.24**
LM	46	20	66	11.07**

*** $p < 0.0001$; ** $p < 0.001$.

LM:large male (2.1-2.4mm); SM:small male (1.6-2.1mm);

LF:large female (2.2-2.4mm); SF:small female (1.9-2.2mm).
